PHYSICAL LAYER MANAGER  
Enterprise Edition • 9.0

## iTRACS Physical Layer Manager Selected as Cable Management System for Detroit Metropolitan Wayne County Airport's North Terminal

iTRACS Physical Layer Manager (iTRACS PLM) was the selected cable management system for the recently completed North Terminal at Detroit Metropolitan Wayne County Airport (DTW). This new facility is 824,000 square feet in size and contains more than 4,000 data jacks and over 10,000 pairs of copper and fiber backbone cabling.

Working with data provided by Ferndale Electric ([www.ferndale-electric.com](http://www.ferndale-electric.com)), iTRACS Corporation's Professional Services Team provided a complete turn key solution including full documentation of network and asset connectivity, populating the database with CAD files to assist day-to-day users in identifying locations of telecommunication rooms and equipment, and the deployment of iTRACS iDiscover.

iTRACS iDiscover will document all active network equipment including their location and connection to switches. iTRACS iDiscover will also update iTRACS PLM when those assets move or are connected/disconnected from the network. iTRACS PLM will be used for day-to-day management of network infrastructure, assets, and the moves, adds and changes (MACs) of those assets to help lower operational costs and improve business processes.

To learn more about how iTRACS Physical Layer Manager can help you manage your airport, data center, campus, or office environment more effectively, please contact us at [sales@itracs.com](mailto:sales@itracs.com) or visit us online at [www.itracs.com](http://www.itracs.com).
